## Regression Table

This document displays the results of two regression models used in the paper. I run two OLS regression models with clustered standard errors (at the respondent level). In the main text, I present coefficient plots (available in the figures folder).

Table 1: Regression Results

	Likelihood	Costs (Casualties)
	Model 1	Model 2
Method: Cyber	-0.108*** (0.010)	0.151*** (0.009)
Media Index	0.015*** (0.001)	0.008*** (0.001)
Partisanship	-0.013*** (0.002)	0.0003 (0.002)
Age	0.001*** (0.0003)	0.001*** (0.0003)
Education	-0.032*** (0.006)	-0.012** (0.005)
Gender	0.068*** (0.010)	0.069*** (0.009)
Income	-0.001 (0.001)	0.002* (0.001)
Constant	0.342*** (0.030)	0.397*** (0.027)
N	3277	3275
R-squared	0.116	0.114
Adj. R-squared	0.114	0.112
